Subject: Ref Planning Application APP/21/00471. (Tree Preservation Order)

[REDACTED]

Whilst I have no objection to the application to reduce the crown of the oak tree as detailed in your letter dated 12 May 2021. I consider that undertaking this work in early summer when a wide range of birds are still nesting to be inappropriate. Our gardens have blue, great and coal tits nesting all of which rely on the invertebrates that live in the oak trees to feed their young, both in the nest and after fledging. We also have all three native woodpeckers and nuthatches as regular visitors to the gardens and oak trees.

The disruption this work will cause to the local wild life is unwelcomed and could easily be avoided if the work was undertaken in the winter.

For these reasons I would ask that if this application is approved the work be delayed until at least October.
