

Havant Borough Council
Planning Department

Your ref: APP/17/00785

Dear Sirs,

Site Address: Church House, The Pallant, Havant, PO9 1BE

Further to your letter of the 26th of July, from Ms D Sheath, I write to provide further information to support our application for Listed Building Consent to install a flue for a central heating system. I have provided scale drawings, which have been uploaded to the Planning Portal, as per your request – both existing and proposed elevations and floor plans. They were created on a CAD system, at minimal cost – but they are reasonably accurate. I hope they will suffice for what is a minor addition to the frontage of Church House. I have also uploaded the specification of the boiler which will be installed (which requires the flue that is the subject of our application).

You have further requested a specification of the flue to be installed. I am advised by our installers (All About Gas of South Street, Havant) that they will be using a standard horizontal flue kit, with a 100mm diameter pipe. They have supplied photographs of the same system in use at another premis **(which I include on the next page of this letter)**.

You have also asked for details of the materials to be used, and how the flue will be fixed to the wall. The flue is constructed of a combination of white plastic and white-painted stainless steel. It will not so much be fixed *to* the wall, as protrude *through* the wall. The hole through which it protrudes will be made air-tight with cement, and painted/covered to match the surrounding wall. All that will be visible from the ground is a small white protusion, on a white-painted wall.

I hope this adequately answers all your queries. Do let me know if there is anything else you require to make a determination.

Yours sincerely,

Canon Tom Kennar
Rector of Havant

Photo of the same type of flue to be used. (In our case, it will protrude through the white-painted wall of church house, not against brickwork as shown).
