

Streetview from the West

Streetview from the West - Photomontage of Proposed Extension

The photomontage images show that the proposed extension will have a minimal impact on the street scene. The new pitched roof will follow a similar line as the existing front Veranda roof and helps to minimise the perceived mass of the extension. The visual separation between the buildings is also maintained.

The view from the West shows that the main house conceals the majority of the new roof and comes into view when nearing the front of the building.

The view from the East shows that the apex of the extension is set-back from the front elevation of the main building and is about 300mm below the top of the first floor windows, which will help to minimise its perceived mass, and when viewed in relation to the main building, appears to be in proportion due to the height of the existing building.
