I am now in receipt of your latest update for the above application and other then screening the north facing balcony a bit higher the screening all round is ugly and is not understood why balcony and screening is necessary. Other then that I see not much notice taken just as I thought would be the case, when it comes to public comments and all windows on north side were said to be obscure at the Pegasus meeting and that is still not the case

As most of the screening trees that are remaining are deciduous they do not serve as screening in the winter so more tall evergreen screening should be planted on the North facing side as well as the existing trees

Yours faithfully
JD WHITE
