Subject: Land South of Bartons Road

Dear Sir,

I have the following concerns about this application:

How will the land be piled to build the houses? To minimise vibration and damage to existing house this should be carried out using an auger.

How will the swale be managed on completion of the work? If it is allowed to overflow or get blocked where will the water go? Has the possibility of mosquito infestation been considered?

What control will be on the workmen on the site for parking, the roads around Denvilles are narrow and we do not want builders parking here.

At the earlier presentation it was suggested that the trees behind Fushia Close would be thinned out and height reduced. We should keep the current depth of planting. Who will manage them in future.
