FAO Mrs T Pickup

Thank you for the notification on the latest planning application for the above site. I am writing in again on behalf of South Hayling United Reformed Church. We are on the south boundary of the site, located very close to the proposed building for part of its south elevation.

I wrote in last year on the previous application commenting on the density and the resultant car parking. This new scheme only increases the problem, and decreases the visual aspect from our northern boundary and therefore should be carefully considered before any decision is made.

The main issue which has not been addressed as far as we know, is that of parking. Highways can say that there is a carpark adjoining, but those who use the shops, our halls and indeed work in the locality, do not use the car park, because of the charges. Consequently, the nearby roads and estates are over used for parking on a daily basis. Our own car park is limited in space, and we need to keep that space dedicated to the Church and hall users.

Parking will also be required for contractors and delivery vehicles during construction. Should you be mindful to approve this application, these issues have to be addressed, and would ask that a condition be included regarding working hours during construction, to avoid excessive noise which could interrupt any midweek services, or meetings.

Regards

Judy Clark,

South HAYling United Reformed Church
