

Lateral Crown Reduction Only

Reduce the lateral spread of the crown by 3.0 metres on each side of the canopy, leaving a final crown spread of 6.0 metres per tree

No reduction to crown height is to be undertaken. All works are to be confined to side canopies only.

Reductions to be carried out by pruning back to suitable lateral growth points, maintaining the natural form and balanced crown

All arisings to be removed from site unless otherwise agreed

T1 and T2 are hanging over driveway also neighbours garage roof and T3 is completely dead which needs to be taken down
