2. All necessary construction traffic will only gain access to site via the points shown by the blue arrows on drawing C.J009595-HES-SGN-FB560-DR-S-1710 Rev P03 (Proposed Site Boundary and Works Access Area). At this location the existing rail and kerbs will be temporarily removed, footpath/road surface will be levelled for easy access, an access barrier and temporary Heras fencing or similar will be installed at the corner with the private properties to prevent unauthorised access to the site.

Refer to the image below. On works completion footpath, kerbs and rail will be reinstated as existing.

Access to private properties not affected by the works

Footpath will be maintained open except at times when access to site is required
