Arboricultural Impact Assessment/Proposal to Install a New Water Tank at Hayling Golf Club, Greenkeepers Yard, Ferry Road.

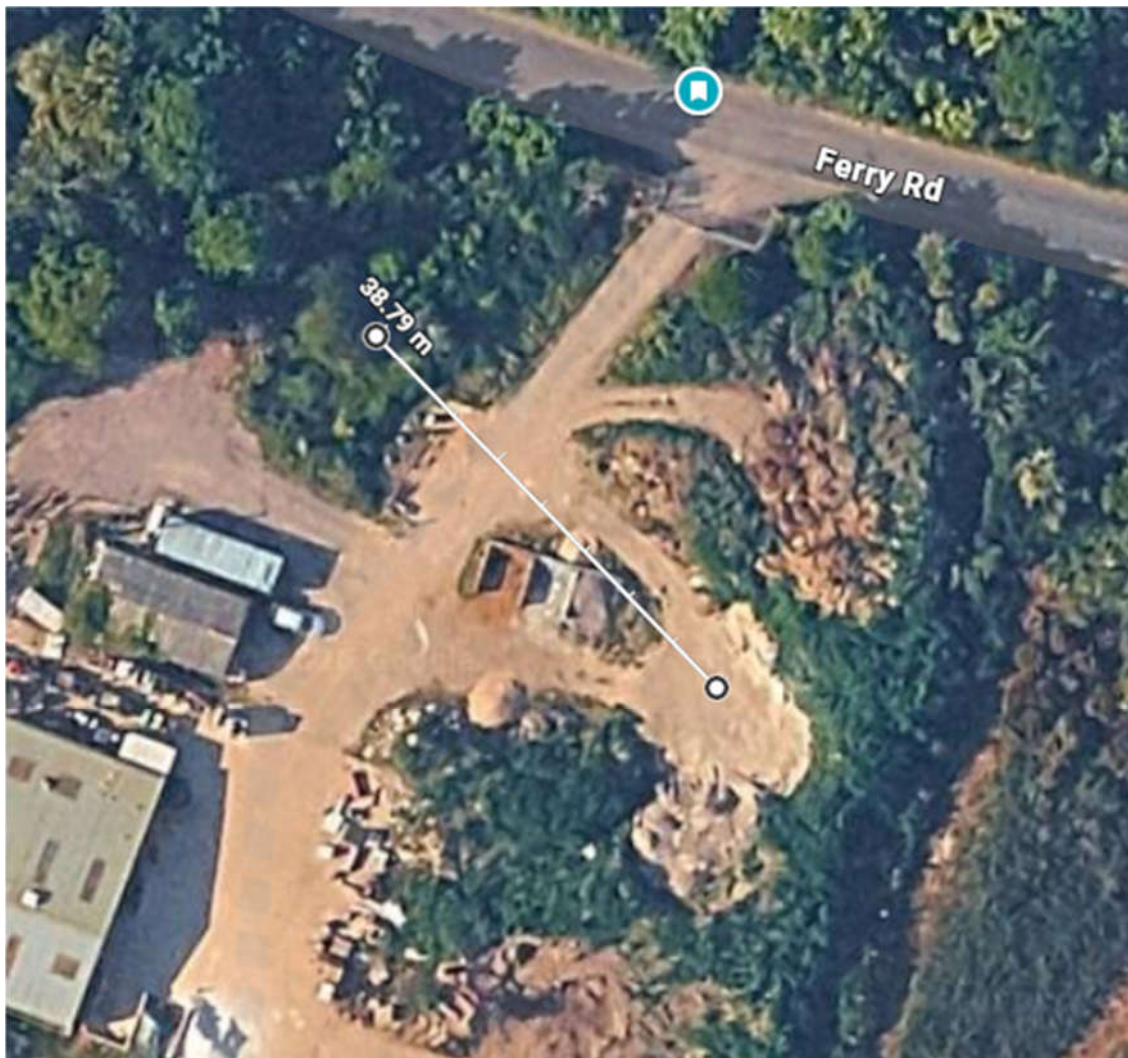

Figure 1 – Satellite image Greenkeepers Yard – Hayling Golf Club

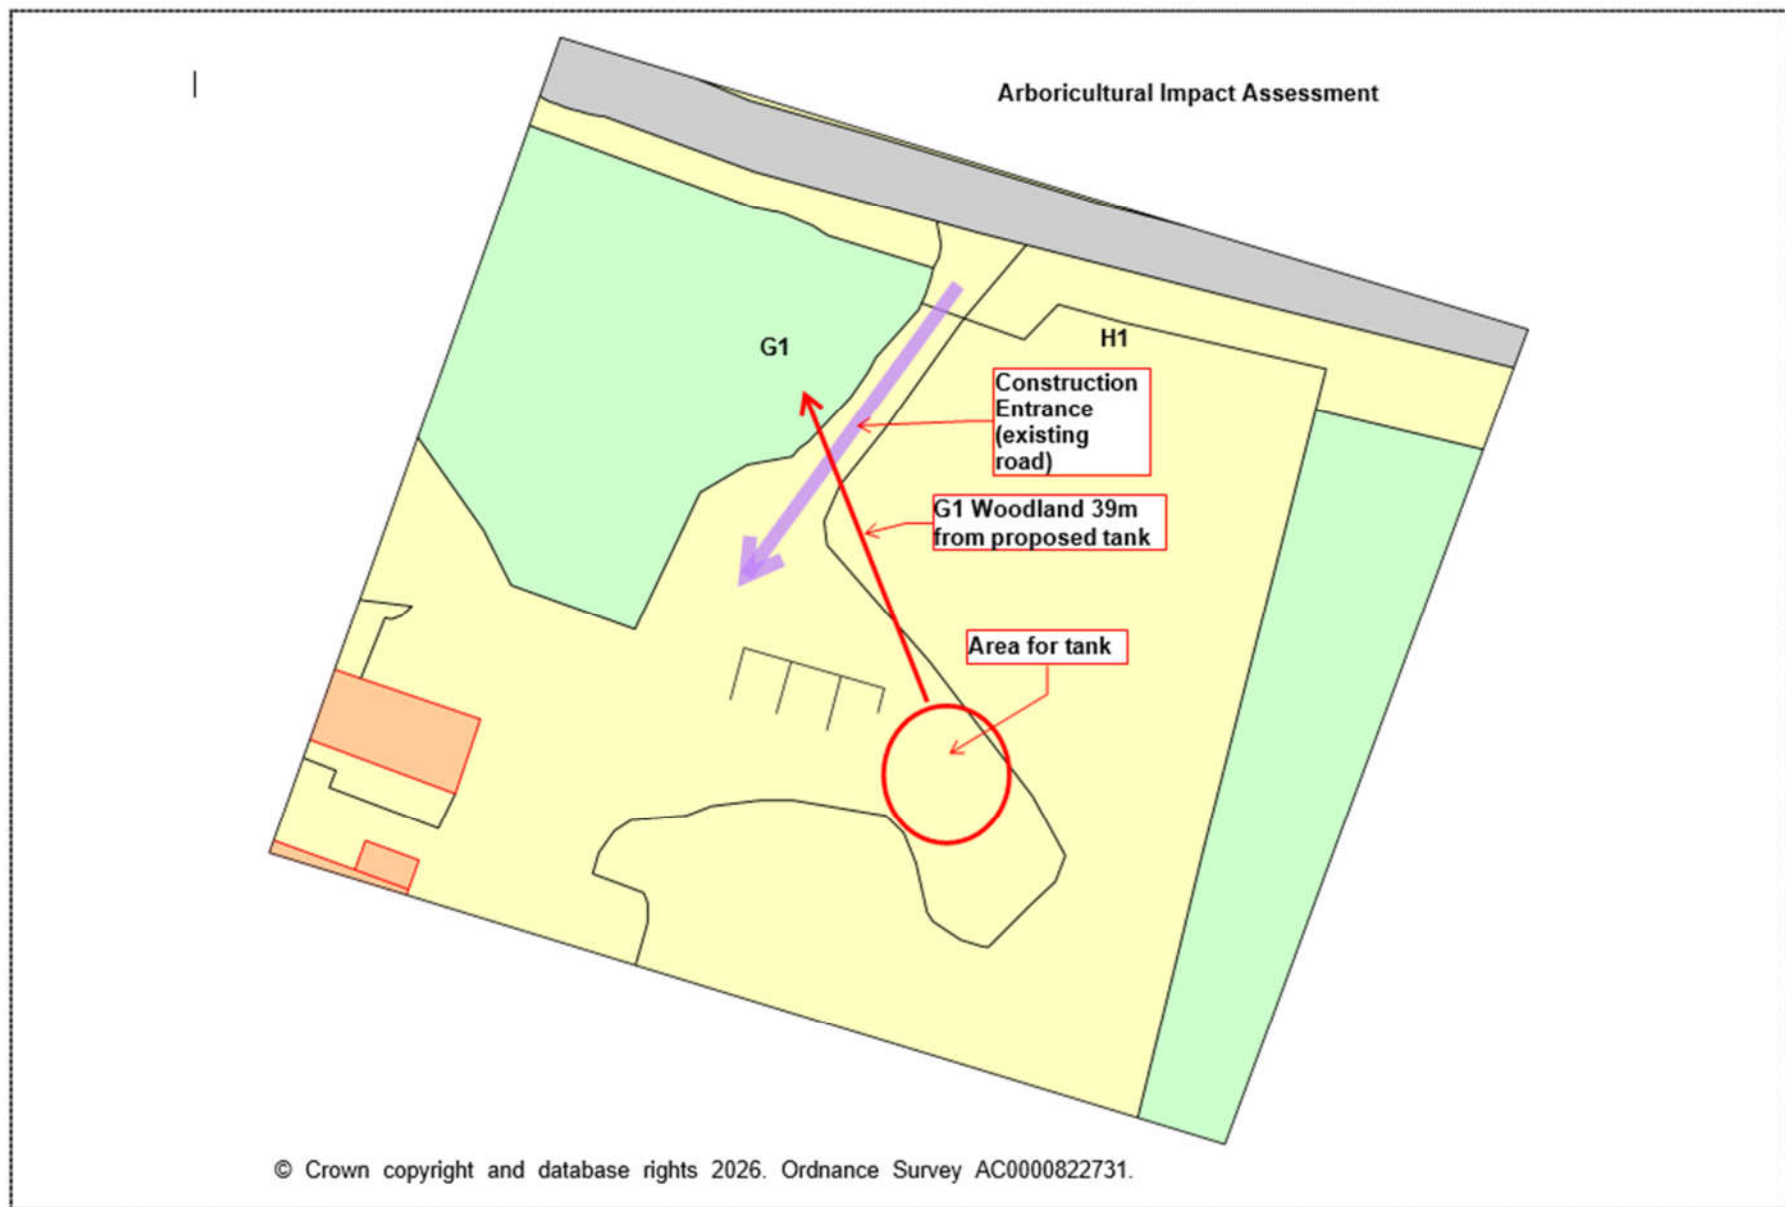

Figure 2 Plan detail.

Arboricultural Impact Assessment

The proposed development comprises the installation of a water storage tank measuring approximately 3.66 metres in height and 18.6 metres in diameter within the Hayling Golf Club, Greenkeepers Yard, Ferry Road, Hayling Island.

An assessment of the site and surrounding vegetation has been undertaken in accordance with current arboricultural best practice. No significant trees, shrubs, or other vegetation are located within the footprint of the proposed development or within the immediate working area.

The nearest arboricultural features are identified as G1 Woodland and H1 Mixed Hedging, both situated in excess of 39 metres from the proposed tank location. Owing to this separation distance, no direct or indirect impacts upon these features are anticipated as a result of the proposed works.

Construction access will utilise the existing site entrance and established internal roadway leading to the existing hardstanding area. As no construction traffic or site activity is required to pass within the root protection areas of retained trees or hedgerows, no adverse impacts upon retained arboricultural features are expected during either the construction or operational phases of the development.

Accordingly, the proposed installation is considered to have a negligible arboricultural impact and no specific tree protection measures are considered necessary.

Kim Gifford
Arboricultural Consultant
