1. WRITTEN REPORT

To: Doug Barker, Stantec, 10 Queen Square, Bristol, BS1 4NT

From: Precision Point Surveys Limited

Watercourses: Field Drain, Nore Farm Stream, Sluice Drain, Unknown Drain 01-07, West Brook Reach 01-03

Date of Survey: July 2023

A) Objectives

Further to your instruction, a river channel survey was carried out on the above watercourses in accordance with your survey specification.

Survey Extents

Field Drain – FIE01 – SU 7437 0683 (Open Channel) to SU 7359 0646 (Open Channel).
Nore Farm Stream – NOR01 – SU 7359 0653 (Open Channel) to SU 7325 0695 (Open Channel).
Sluice Drain – SLU01 – SU 7367 0649 (Culvert Entrance) to SU 7367 0649 (Open Channel).
Unknown Drain 01 – UNK01 – SU 7395 0670 (Open Channel) to SU 7388 0710 (Open Channel).
Unknown Drain 02 – UNK02 – SU 7418 0713 (Open Channel) to SU 7372 0711 (Open Channel).
Unknown Drain 03 – UNK03 – SU 7387 0683 (Open Channel) to SU 7383 0681 (Open Channel).
Unknown Drain 04 – UNK04 – SU 7379 0723 (Culvert Entrance) to SU 7365 0740 (Open Channel).
Unknown Drain 05 – UNK05 – SU 7378 0733 (Open Channel) to SU 7390 0737 (Open Channel).
Unknown Drain 06 – UNK06 – SU 7388 0712 (Open Channel) to SU 7385 0733 (Open Channel).
Unknown Drain 07 – UNK07 – SU 7363 0692 (Open Channel) to SU 7365 0712 (Open Channel).
West Brook Reach 01 – WES01 – SU 7477 0642 (Culvert Entrance) to SU 7422 0713 (Culvert Exit).
West Brook Reach 02 – WES02 – SU 7423 0732 (Culvert Entrance) to SU 7408 0756 (Open Channel).
West Brook Reach 03 – WES03 – SU 7400 0770 (Culvert Entrance) to SU 7403 0775 (Open Channel).

B) Survey Control

Control for the survey was derived using Global Navigation Satellite Systems (GNSS). One new permanent E6 Grade control station (E6-474348-106879) was installed utilising Trimble 'VRS', a Network Real Time Kinematic (RTK) survey method. VRS was used to install control throughout the survey catchment.

GNSS techniques were deployed in accordance with the EA specification. All baselines were processed in Trimble Business Centre v4.00 using the manufacturers recommended processing parameters. Final ETRS89 coordinates were exported to the Ordnance Survey (OS) approved software – Grid InQuest V.7.0, which was used to convert coordinates from the ETRS89 coordinate system into the OSGM15 (OS grid) system. All Control Station details are included in this report.

C) Topography

The topography has been surveyed using a Leica TS07 Total Station in accordance with the specification.

D) Digital Data

For list of data provided please see section 4. Deliverables

All data supplied has been run through the latest edition of AVG Anti – Virus software and is, to the best of our knowledge, virus – free.

E) General Comments

Field Drain

At FIE01_0483 (Footbridge US Face) a sluice gate was surveyed immediately upstream of the structure. This has been shown on the cross section & long section drawings.

At FIE01_0766 (Footbridge US Face) wooden logs have been stacked up against the structure. These have been surveyed and shown on the cross section & long section drawings.

The position of the Sluice Gate (SLU01) on the right bank of this watercourse has been shown on the long section drawing. There appears to be a dip in the bed at this location.

A flap was located on the Culvert Exit (FIE01_1021) and has been surveyed and shown on the cross section and long section drawing.

Nore Farm Stream

The requested bank levels on this watercourse have been surveyed and shown on the location plan drawing as well as provided in XYZ format. They have also been included in the long section drawing to show the true levels of the left bank.

Due to the level of vegetation within the channel, surveyors were unable to locate the requested outfall pipe.

Cross section NOR01_0346 was extended on the right bank to include the pond within the survey.

Sluice Drain

Three cross sections have been surveyed at this location. The most downstream cross section (SLU01_0000) shows the Culvert Entrance leading beneath the A27. The middle section (SLU01_0001) shows the sluice gate allowing water to feed into the Culvert. The most upstream cross section (SLU01_0002) is an open channel to show the natural shape of the channel before it turns into culvert. This is at the confluence with Field Drain.

Unknown Drain 01

At Culvert Exit (UNK01_0160) two pipes were located, however when surveying Culvert Entrance (UNK01_0174) only one pipe could be found. Close up photos (332310755_PGE_UNK01_0174_USF3.jpg) have been taken at the Culvert Entrance and it is possible that one pipe has been blocked up with mud and debris.

This watercourse appears to run from a confluence with Unknown Drain 02 down to Field Drain.

Unknown Drain 02

The most upstream extent of this drain appears to be a wall without any opening in it (UNK02_0488). It then runs downstream past the junction of the downstream of UNK06 & the upstream of UNK01 and flows into West Brook Reach 1.

Unknown Drain 03

This drain doesn't appear to be connected to anything and surveyors have taken levels at the downstream and upstream extent of it to show where it rises back to ground level.

Unknown Drain 04

It is assumed this watercourse is connected to UNK06 via the culvert that starts at UNK04_0160. A 0.25m concrete pipe was located on the right bank of UNK06 and sound tests between the two were performed. Surveyors could not confirm the connectivity between these pipes but for the purpose of this survey the drawing shows them connected.

Further upstream the watercourse flows under Southleigh Road via the left pipe of the three located at the culvert exit (UNK04_0235). Sound tests confirmed the connectivity between the Entrance & Exit via this one pipe. Surveyors were unable to locate the source of the other two pipes located at the Culvert Exit.

Further upstream of Southleigh Road the Drain appears to rise up to ground level and then back down into the drain for a further 100-150m before rising again to ground level.

332310755 - Southleigh Road, Havant Survey Report

Precision Point Surveys Ltd.

July 2023

Unknown Drain 05

This drain wasn't very apparent, and sections were taken at approximately ground level. The drain doesn't appear to be connected to anything and surveyors have taken levels at the downstream and upstream extent of it to show where it rises back to ground level.

Upstream of UNK05_0178 a slight dip in the left bank appears to feed a channel which surveyors believe could join up with UNK06.

Unknown Drain 06

This drain, as previously mentioned, appears to be fed from UNK05 on the left bank. It then runs into a pipe which was located in the woodland (UNK06_0225) and under Southleigh Road and out of UNK06_0101. The connectivity between UNK06_0225 & UNK06_0101 could not be confirmed despite surveyors carrying out sound tests. Further downstream of UNK06_0101 the drain runs into UNK02.

Unknown Drain 07

This drain doesn't appear to be connected to anything and surveyors have taken levels at the downstream and upstream extent of it to show where it rises back to ground level.

West Brook Reach 1

Within the pipe of WES01_0000 an additional pipe enters the culvert from the left side. This pipe has been shown on the long section drawing.

WES01_0779, WES01_0860 & WES01_0923 have been extended through the flood basin to show the full extent of this. Bank levels have been surveyed around this at 5m spacings and displayed on the location plan drawing. XYZ data has also been provided.

It is unconfirmed where the water feeds from before making its way to WES01_1102. For the purpose of this survey the upstream extent of this watercourse is WES01_1102.

West Brook Reach 2

Surveyors located a pipe on the north side of Southleigh Road. An additional channel has been surveyed from this location up the west side of Horndean Road where a ditch appears to be present.

West Brook Reach 3

Surveyors measured the Culvert Entrance (WES03_0000) East of Horndean Road and surveyed the channel from here upto WES03_0053. This was treated as a separate channel again as it was unclear what this watercourse connects to. The manhole next to the Culvert Entrance was lifted and photos appear to show the flow leading down beneath the road.

All cross-sections are viewed looking downstream.
